Eradicating Extreme Poverty by 2030

Ms. Richa Kumari
B.Tech ME 4th Year

Eradicating extreme poverty by 2030 is a global goal requiring urgent action. Sustainable economic growth, education, healthcare, and social protection are key drivers. Governments must implement inclusive policies, while businesses and NGOs should foster job creation and entrepreneurship. Technology can bridge gaps in financial and digital inclusion, empowering marginalized communities.

Climate resilience is crucial, as poverty and environmental challenges are interconnected. International cooperation and responsible governance ensure resources reach those in need. Achieving this goal demands collective commitment, innovative solutions, and a focus on equity, ensuring that no one is left behind in the fight against poverty.
